Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-8, drawn to a process of reacting the reagents set forth, classified in class 522, subclass various depending on the kind of reagents.
- II. Claims 1-8, drawn to a product of reaction between the reagents set forth, classified in class 526, subclass 348.8.
- III. Claims 9-20, drawn to a process for mixing reagents using two different vessels 1 and 2, classified in class 522, subclass 003.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process as claimed can be used to make numerable materially different products, such as compounds, oligomers or polymers. In the instant case, the products as claimed can be made by another materially different process such as by free radical reaction or reaction initiated by ultrasonic energy or by ultraviolet light energy or by ionizing radiation.

Inventions I or II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and different effects. Group I claims require "reacting" in the presence of some kind of initiator. Group III claim require the use of two vessels and specific mixing steps. The method steps of Group III are not required to make the products of Group II.

Application/Control Number: 10/708,732

Art Unit: 1711

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Because these inventions are distinct for the reasons given above and the search required for Group III is not required for Group I or II, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention: The process claims of Group I are directed to numerous species of Group 2 reagents. The product claims of Group II are directed to reaction products of the Group 1 reagents with numerous different species of Group 2 reagents.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of Group 2 reagent for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-8 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of Application/Control Number: 10/708,732

Art Unit: 1711

the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under

35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named

inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of

inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37

CFR 1.17(i).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should

be directed to Susan W Berman whose telephone number is 571 272 1067. The examiner can normally

be reached on M-F 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James

Seidleck can be reached on 571 272 1078. The fax phone number for the organization where this

application or proceeding is assigned is 571 273-8300.

Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be obtained

from either Private PAIR or Public PAIR. Status information for unpublished applications is available

through Private PAIR only. For more information about the PAIR system, see http://pair-

direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
